AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) An apparatus for supporting a user's behavior, comprising:

a behavior schedule database configured to store a schedule for the user, the schedule including a date, a start time, an end time, a behavior label, and a route schedule;

an integrated behavior database generation unit configured to generate an integrated behavior database correspondingly storing a biomedical information and a behavior information of the user, the biomedical information being detected by a sensor associated with the user's body, the behavior information including the user's actual behavior in the past;

a behavior rule generation unit configured to generate a behavior rule of the user by referring to the integrated behavior database, the behavior rule representing a tendency of the user's behavior in the past;

a behavior schedule reorganization unit configured to reorganize the schedule by referring to the behavior rule, wherein at least the route schedule is reorganized;

a message generation unit configured to generate a message to urge the user to walk according to the route schedule do an exercise by referring to the reorganized schedule behavior rule; and

a message notice unit configured to notify the user of the message.

2. (Currently Amended) The apparatus according to claim 1,

wherein the behavior information comprises a behavior database, and a feeling

description database~~, and a behavior schedule database~~.

3. (Original) The apparatus according to claim 2, wherein the behavior

database correspondingly includes a date, a start time, an end time, a start point, an

end point, a user name, a behavior label, and a route.

4. (Previously Presented) The apparatus according to claim 3,

wherein the feeling description database correspondingly includes a date, a start

time, an end time, a user name, and a feeling description.

5. (Currently Amended) The apparatus according to claim 4,

wherein the behavior schedule database correspondingly includes a number of

steps estimated by said behavior schedule reorganization unit ~~date, a start time, an end~~

~~time, a start point, an end point, a user name, a behavior label, and a route schedule~~.

6. (Original) The apparatus according to claim 5, wherein the biomedical

information comprises a sensor database, and wherein the sensor database

correspondingly includes a date, a start time, an end time, a measurement value of the

sensor at the start time, and a measurement value of the sensor at the end time.

7. (Previously Presented) The apparatus according to claim 6,

wherein said integrated behavior data generation unit merges information of the

behavior database, the feeling description database and the behavior schedule

database for the same user, the same date, the same start time and the same end time,

and generates the merged information as the integrated behavior database.

8. (Previously Presented) The apparatus according to claim 1,

wherein said behavior rule generation unit extracts the tendency of the user's

behavior from information of the integrated behavior database, modifies the extracted

information as a rule having condition and result, and generates the rule as a behavior

rule database.

9 . (Previously Presented) The apparatus according to claim 1, further

comprising a relational database configured to store a conception dictionary dataset, a

behavior label set, a calendar weather data set, a route data set, a location data set,

and a map dataset, and

wherein said integrated behavior data generation unit adds information to the

integrated behavior database by referring to each set of the relational database.

10. (Currently Amended) The apparatus according to claim 8, ~~further~~

~~comprising a~~ wherein said behavior schedule reorganization unit reorganizes the route

schedule so that an estimated number of steps is constantly above a target value of a

number of steps ~~configured to reorganize information of the behavior schedule~~

~~database by referring to the behavior rule database, and~~

~~wherein said message generation unit generates the message as an advice to~~

~~urge the user to do the exercise by referring to the reorganized information of the~~

~~behavior schedule database~~.

11. (Original) The apparatus according to claim 10, further comprising a

behavior advice database configured to store the message in correspondence with the

behavior rule.

12. (Original) The apparatus according to claim 1, further comprising,

an advice evaluation input unit configured to input an evaluation for the message

from the user, and

an advice evaluation database configured to store the evaluation in

correspondence with the message.

13. (Previously Presented) The apparatus according to claim 12,

further comprising an exercise constraint condition rule database configured to

correspondingly store the behavior rule and the evaluation, and

wherein said message generation unit generates a message by referring to the

exercise constraint condition rule database.

14. (Previously Presented) The apparatus according to claim 5,

further comprising a data interface unit configured to input the feeling description and the behavior schedule data from the user.

15. (Original) The apparatus according to claim 14,

wherein said data interface unit interactively inputs a status data of the user's moving by the user's indication, and records the status data as the user's behavior in time series.

16. (Original) The apparatus according to claim 15,

wherein said data interface unit outputs a behavior graph of the user by using the recorded status data in time series.

17. (Previously Presented) The apparatus according to claim 13,

further comprising a database share unit configured to share information of the integrated behavior database and the exercise constraint condition rule database among a plurality of users.

18. (Previously Presented) The apparatus according to claim 6,

further comprising a location detection unit configured to detect the user's location information, and

wherein the integrated behavior database correspondingly stores the biomedical

information, the behavior information and the location information.

19.   (Currently Amended) A method for supporting a user's behavior,

comprising:

storing a schedule for the user in a behavior schedule database, the schedule

including a date, a start time, an end time, a behavior label, and a route schedule;

generating an integrated behavior database correspondingly storing a biomedical

information and a behavior information of the user, the biomedical information being

detected by a sensor associated with the user's body, the behavior information including

the user's actual behavior in the past;

generating a behavior rule of the user by referring to the integrated behavior

database, the behavior rule representing a tendency of the user's behavior in the past;

reorganizing the schedule by referring to the behavior rule, wherein at least the

route schedule is reorganized;

generating a message to urge the user to walk according to the route schedule

do an exercise by referring to the reorganized schedule behavior rule; and

notifying the user of the message.

20.   (Currently Amended) A computer program product on a tangible computer

readable medium, comprising:

a computer readable program code embodied in said product for causing a computer to support a user's behavior, said computer readable program code comprising:

a first program code to store a schedule for the user in a behavior schedule database, the schedule including a date, a start time, an end time, a behavior label, and a route schedule;

a ~~first~~ second program code to generate an integrated behavior database correspondingly storing a biomedical information and a behavior information of the user, the biomedical information being detected by a sensor associated with the user's body, the behavior information including the user's actual behavior in the past;

a third ~~second~~ program code to generate a behavior rule of the user by referring to the integrated behavior database, the behavior rule representing a tendency of the user's behavior in the past;

a fourth program code to reorganize the user's schedule by referring to the behavior rule, wherein at least the route schedule is reorganized;

a ~~third~~ fifth program code to generate a message to urge the user to walk according to the route schedule ~~do an exercise~~ by referring to the reorganized schedule ~~behavior rule~~; and

a ~~fourth~~ sixth program code to notify the user of the message.
